Medication is a common treatment for mental health conditions. It can help manage symptoms and improve quality of life. However, it's important to remember that medication is just one part of a comprehensive treatment plan. It's important to work with a healthcare provider to find the right medication and dosage for you. Medication can also have side effects, so it's important to monitor for any changes and report them to your healthcare provider. It's also important to remember that medication is not a cure-all and it's important to continue to seek support and treatment for mental health conditions.

Adopted after this second and final reading on the 25th day of February 2025.
